DETAILED ACTION

This Action is in response to the communication filed on 3/30/2007.

The amendment filed 3/30/2007 is acknowledged and has been entered.

Claims 27-32 are currently pending in the application and are addressed herein.

Claim Rejections - 35 USC § 103

- 1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. Claims 27-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,789,245 (Dubensky et al., previously of record) in view of Chanas et al. (J. Gen. Virol., cited by Applicants in the IDS 11/12/2002).

Dubensky teaches an alphavirus vector (including a Sindbis virus) which encodes and expresses a heterologous nucleic acid sequence as well as methods of using said vector for prophylactic and/or therapeutic purposes. For instance, Dubensky teaches administering the alphavirus vector which expresses a therapeutic protein to an human for prophylactic and/or

Application/Control Number: 10/069,305

Art Unit: 1635

therapeutic treatment of disease (e.g., see column 2, lines 57-67; column 3, lines 53-67; column 4, lines 1-41; column 7, lines 60-67; column 8, lines 1-6 and 41-67; etc.).

Dubensky does not teach to administer an antibody that specifically binds to the E1 glycoprotein of the alphavirus along with the alphavirus.

Chanas teaches that monoclonal antibodies specific for the E1 glycoprotein of Sindbis virus can, at particular concentrations (subneutralizing dilutions) enhance infectivity for macrophage-like cells (e.g., page 7: summary and introduction. Chanas demonstrates this effect by administering a sindbis virus (which is an alphavirus) with the E1 glycoprotein-specific antibodies to a mouse (e.g., see pages 43-44).

Therefore, it would have been *prima facie* obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of Dubensky and Chanas to create a method of using E1 glycoprotein specific antibodies with an alphavirus that comprises a heterologous sequence in order enhance the infectivity of the alphavirus in a subject, including a human to with a reasonable expectation of success.

The motivation to combine the references to create claimed invention and is provided by Chanas who teaches that subneutralizing dilutions of E1-glycoprotein antibodies enhance the infectivity of an alphavirus. Furthermore, the fact that the antibodies enhanced infectivity of the sindbis virus in mice demonstrates a reasonable expectation of success that infectivity of the alphavirus taught by Dubensky could be enhanced in a subject, including a human, without causing significant pathology.

Response to Arguments

Application/Control Number: 10/069,305

Art Unit: 1635

4. Applicant's arguments, filed 3/30/2007, with respect to the rejection of claims under 35 U.S.C. 103(a) have been fully considered and, in view of the amendment, are persuasive. Therefore, the rejection has been withdrawn. However, upon consideration of the newly amended claims, a new ground(s) of rejection is made for the reasons set forth herein. The new grounds of rejection is necessitated by the amendment to the claims.

Conclusion

- 5. No claim is allowed.
- 6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to J. Eric Angell whose telephone number is 571-272-0756. The examiner can normally be reached on Monday-Thursday 8:00 a.m.-6:00 p.m..

Application/Control Number: 10/069,305

Art Unit: 1635

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Douglas Schultz can be reached on 571-272-0763. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
